

## ROI Summary

The AgCarE Framework provides landholders with a pathway to identify and capture natural capital values on property, as well as current and future revenue streams pertaining to those values. Coupled with a comprehensive mapping suite, AgCarE provides landholders with the following:

### AgCarE's Current Commercial values to the landholder

- Identifies the properties environmental values including threatened ecological communities and matters of national significance (C'wealth legislation), essential habitat, remnant vegetation, protected plants and endangered regional ecosystems (State legislation).
- Identifies and maps potential carbon project and biodiversity offset areas.
- Identifies an agribusiness carbon balance.
- Identifies and rates the agribusiness ESG values.
- Identifies and rates best practice performance based upon commodity.
- Provides a mapping suite that includes soils, land types, vegetation, ground cover, ground cover comparison and carrying capacity.

### AgCarE's potential commercial values to the landholder

- Linkages to current and future drought funding (DAF & DAWE) based upon the Activities module and resilience planning.
- Linkages to low interest financing based on ESG goals identified in the Activities module.
- Development of carbon and biodiversity offset projects providing alternative revenue streams.
- Linkages to lower insurance premiums based upon AgCarE assessment and activities.
- Access to new markets.
- Linkages to third party certification, providing revenue for biodiversity protection and enhancement schemes.
